

Zeman Steel Beam Assembly (SBA) Machine

Fabricators in Australia and New Zealand that have commissioned a Zeman SBA machine are reporting:

- An increase in capacity without increasing headcount or the workshops footprint
- Improvements in scheduling that allows the workshop to take on a 2nd or 3rd project
- Fabrication accuracy where it is impossible to fabricate the correct part in the incorrect position or the incorrect part in the correct position
- The ability to re-task man-hours when the SBA is fabricating every add-on-part up to 200kg between 1 and 1.5 minutes depending on what SBA is commissioned
- Increased bid-to-win ratio and profit.
- Assembly of add-on 15 times faster than manual fabrication
- Arc on welding efficiency at 80%
- 10,000 tonne of fabrication per year from a 12 hour shift

Automating fabrication and welding is reducing the man-hours per ton to fabricate steel which is allowing the business with a Zeman SBA to win more and do more which is what you want isn't it?
